Research

Doctoral Research [Aug 2011 – 2017]

Dissertation: Fully Solution Processed Flash Memory, Thesis advisor: Prof. V. Venkataraman, Dept. of Physics., IISc, Bangalore, India

- Developed all inorganic fully solution processed, spin – coated CdTe nanoparticle based capacitive memory technology.
- Developed a ultra-high speed Capacitance–voltage (CV) measurement technique (Electrical measurement technique) for two terminal memory device applications.
- Developed a fully solution processed spin-coated floating gate memory devices (memory-FET), Capable of simultaneous non – volatile memory operation.
- Discovered intrinsic electronic deep trap and transport mechanism in oxide for memory application. Currently working on fabrication of non-volatile array of Memory Tech.

Masters Project [Aug 2009 – July 2011]

Project: Bistability of CdTe quantum dots, Thesis advisor: Prof. V. Venkataraman

- Growth of hydrothermal CdTe-NP and developed a new material with the mixture of CdTe QDs and ALPO for the two terminal non – volatile memory applications.
- Growth solution processes dielectrics: ALPO, ZrO₂, TiO₂, and HfO₂ and semiconductor: IGZO, IZO, In₂O₃, and ZnO₂ for fully solution processed TFT and memory applications.
- Shown the performance comparison between inorganic with organic dielectric (ALPO vs PDDA) & semiconductors (IGZO vs MEH-PPV) for nanoelectronic device applications.
- Observed the bistability on CdTe-NP and P3HT/MEH-PPV composite device.
